```

9.3 Prior information and Bayesian synthesis.

Prior based on a previously-fitted model using economic and political condition.

```
begin
theta_hat_prior = 0.524
se_prior = 0.041
end;
```

Survey of 400 people, of whom 190 say they will vote for the Democratic candidate.

```
begin
n = 400
y = 190
end;
```

Data estimate.

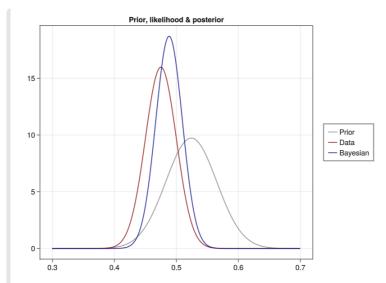

```
theta_hat_data = 0.475

• theta_hat_data = y/n

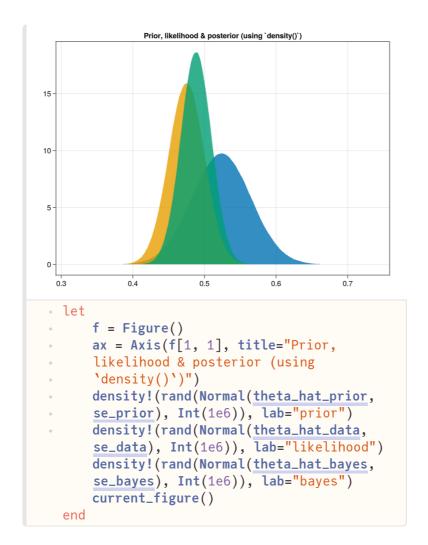

se_data = 0.02496873044429772

• se_data = √((y/n)*(1-y/n)/n)
```

Bayes estimate.

```
• let
     x = 0.3:0.001:0.7
     f = Figure()
     ax = Axis(f[1, 1], title="Prior,
     likelihood & posterior")
     prior = lines!(f[1, 1], x, pdf.
     (Normal(theta_hat_prior, se_prior), x),
     color=:gray)
     data = lines!(x, pdf.
      (Normal(theta_hat_data, se_data),
     x),color=:darkred)
     bayes = lines!(x, pdf.
      (Normal(theta_hat_bayes, se_bayes), x),
      color=:darkblue)
     Legend(f[1, 2], [prior, data, bayes],
      ["Prior", "Data", "Bayesian"])
     current_figure()
 end
```

9.4 Example of Bayesian inference: beauty and sex ratio.
